MICROBLOG

UI/UX Design Specifications

Visual reference and developer handoff document

Project	Micro-blogging Social Network
Contributor	Member 3 – UI/UX Designer
Design tool	Figma
Purpose	Visual reference and handoff notes for the frontend team

Important: The PNGs are visual references, not editable Figma source files. Recreate their elements as editable Figma frames, text, shapes and components before treating the designs as final. These specifications are proposed UI guidance, not additional backend/API requirements.

Included screens

File	Screen	Suggested frame
01_login.png	Login	1440 × 1024 px
02_signup.png	Signup	1440 × 1024 px
03_home_feed.png	Home feed	1440 × 1024 px
04_post_composer.png	Post composer modal	1440 × 1024 px
05_profile.png	User profile	1440 × 1024 px

1. Shared Design System

Use one consistent visual language across all five screens. Keep the interface simple and familiar, reserving blue for primary actions and active states.

Colour palette

Token	HEX	Usage
Primary blue	#2563EB	Primary buttons, links, active navigation
Page background	#F5F7FA	Main page background
Surface / card	#FFFFFF	Cards, forms and panels
Primary text	#111827	Headings and body text
Secondary text	#6B7280	Supporting text and metadata
Border	#D1D5DB	Input/card borders and dividers
Like accent	#EF4444	Liked state only
Success (optional)	#10B981	Success feedback

Typography

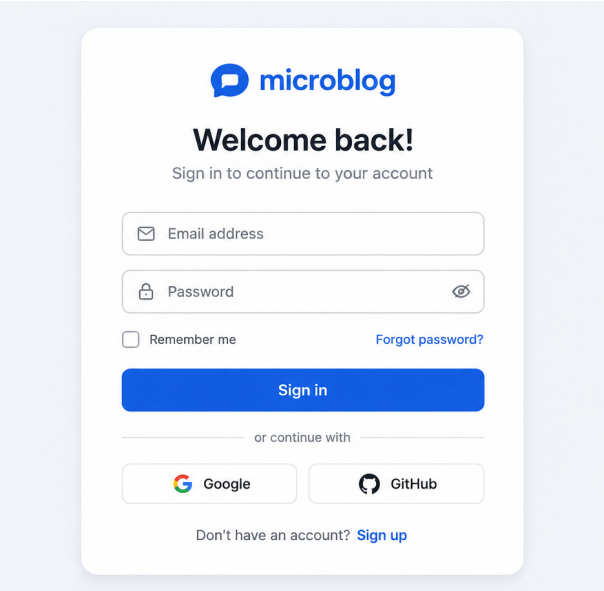

- Font family: Inter (or a similar clean sans-serif if unavailable).
- Page title: 32 px, bold; section heading: 24 px, semibold/bold.
- Card heading: 20 px, semibold; body: 16 px, regular.
- Labels and metadata: 14 px, regular; helper text: 12 px, regular.

Layout and reusable components

- Desktop reference frame: 1440 × 1024 px.
- Use an 8 px spacing scale: 8, 16, 24, 32 and 40 px.
- Standard input height: 48–52 px; button height: 48–52 px.
- Input/button radius: 8 px; card radius: 12–16 px.
- Keep text contrast readable and controls clearly labelled.
- Use consistent spacing, alignment, icon style and button states.

2. Screen 1 – Login

Reference image: 01_login.png

Purpose

Allow an existing user to sign in.

Layout

- Center a white login card on the light-grey page background.
- Suggested card size: 640 × 720 px; radius 16 px; internal padding 40 px.
- Center the logo, title and supporting text; keep form fields full-width within the card.

Content and components

- Brand label: microblog.
- Heading: Welcome back!.
- Supporting text: Sign in to continue to your account.
- Email address input.
- Password input with show/hide affordance.
- Optional remember-me checkbox (UI only unless supported by the team's auth design).
- Primary Sign in button.
- Footer link: Don't have an account? Sign up.

Dimensions

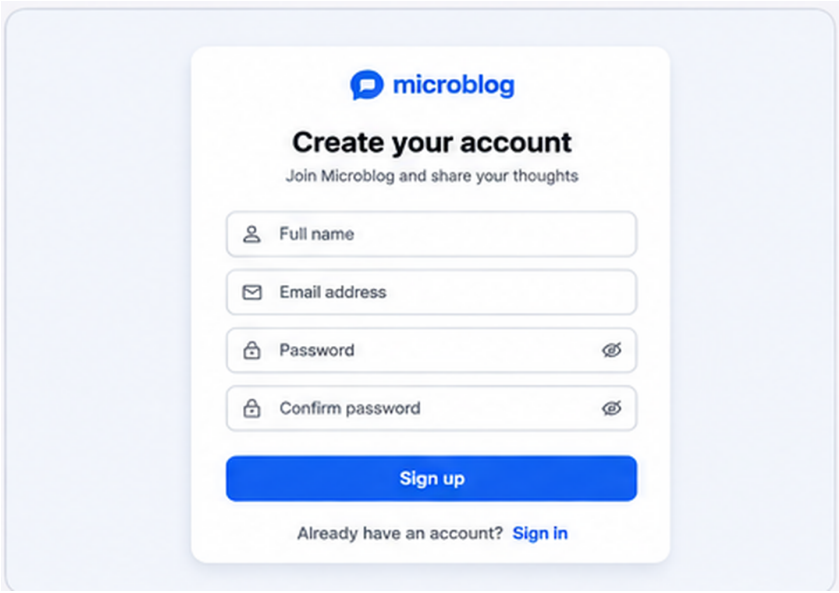

Element	Specification
Card	Approximately 640 × 720 px
Inputs	Full content width, 52 px high
Primary button	Full content width, 52 px high
Form control gap	16 px

Scope note

> The PRD lists email/username and password login. OAuth buttons and a forgot-password flow are not part of the stated official API contract; do not add them unless the team approves.

3. Screen 2 – Signup

Reference image: 02_signup.png

Purpose

Create a new account.

Layout

- Reuse the login page background, centered white card, logo, typography and blue primary action.
- Keep the form vertically stacked and easy to scan.

Content and components

- Brand label: microblog.
- Heading: Create your account.
- Supporting text: Join Microblog and share your thoughts.
- Full name/display name field (confirm exact field with backend/API owner).
- Username field.
- Email address field.
- Password field.
- Primary Sign up button.
- Footer link: Already have an account? Sign in.

Dimensions

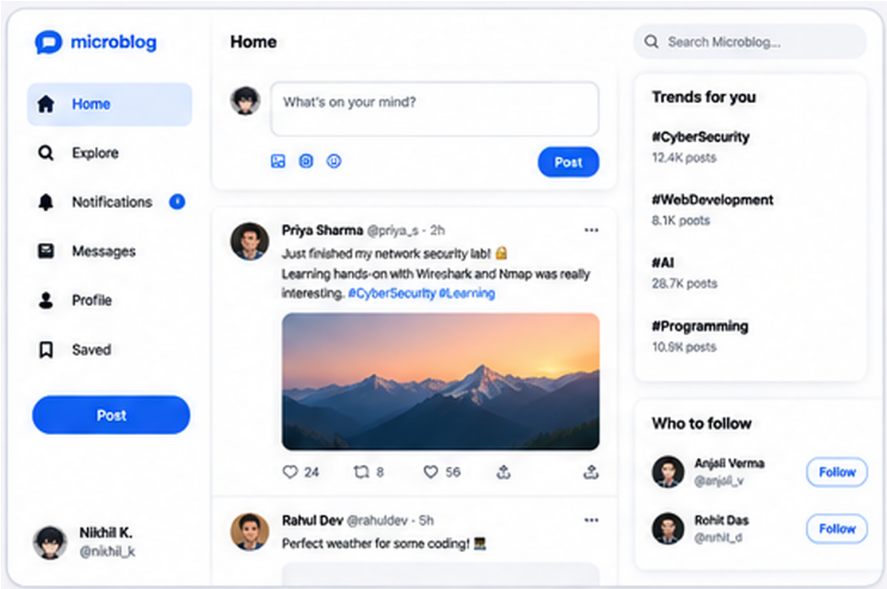

Element	Specification
Card	Suggested 640 × 720 px; radius 16 px
Inputs	Full content width, 48–52 px high
Vertical gap	12–16 px
Primary button	52 px high

Scope note

> The PRD registration contract requires email, username and password. A display-name field may be collected during profile setup; confirm with the team before making it mandatory during registration.

4. Screen 3 – Home Feed

Reference image: 03_home_feed.png

Purpose

Show recent posts from accounts the signed-in user follows.

Layout

- Three-column desktop layout: left navigation, central feed and right discovery/sidebar.
- Suggested widths: left 220–240 px; center 600–680 px; right 260–300 px; use flexible gaps.
- The central feed should be the visual focus.

Content and components

- Left navigation: Microblog logo; Home, Explore/Search, Notifications, Profile and other team-approved items; prominent Post button.
- Main feed: Home heading; What's on your mind? composer prompt; post cards with avatar, display name, username, timestamp, text and optional media.
- Engagement actions: Reply, Repost, Like and Share.
- Support loading/empty states and a visible load-more/infinite-scroll state.
- Right sidebar: Search field; trending hashtags/discovery panel if in agreed scope; suggested users / Who to follow.

Dimensions

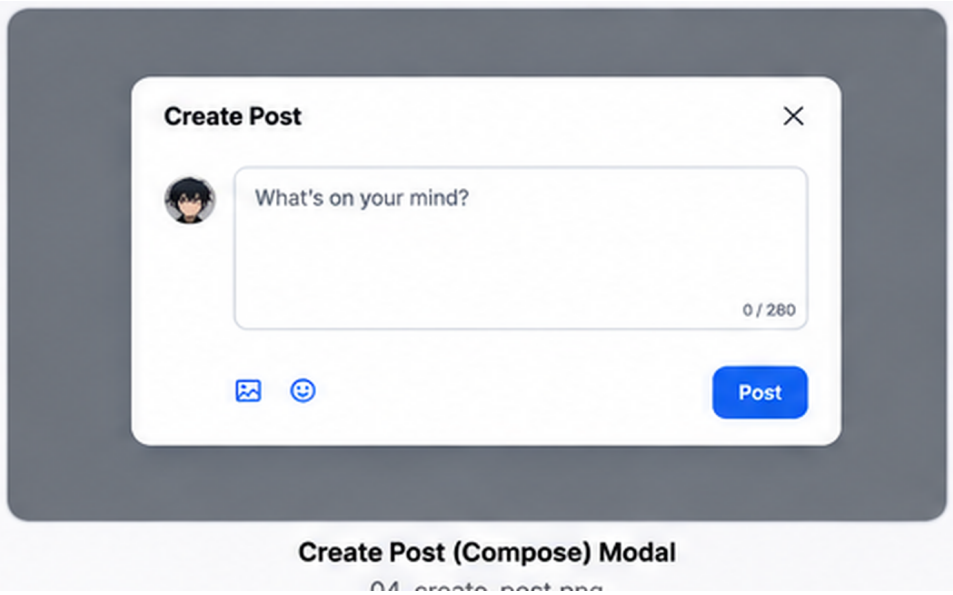

Element	Specification
Left navigation	220–240 px
Central feed	600–680 px
Right sidebar	260–300 px
Post card padding	16 px
Avatar	40–48 px
Card radius	12 px
Border	#D1D5DB

Scope note

The official home feed is based on posts from followed users, newest first, with cursor pagination. A personalised recommendation feed is outside the stated PRD scope.

5. Screen 4 – Post Composer

Reference image: 04_post_composer.png

Create Post (Compose) Modal

04_create_post.png

Purpose

Let a signed-in user create a short post.

Layout

- Modal/dialog centered over a dimmed page overlay.
- White modal surface with 12–16 px corner radius.
- Close control in the top-right corner.

Content and components

- Heading: Create Post.
- Current user's avatar.
- Multiline text area with placeholder What's on your mind?.
- Character counter, for example 0 / 280.
- Image attachment control.
- Primary Post button.

Dimensions

Element	Specification
Modal width	Suggested 560–640 px
Text area	Minimum height 140 px
Modal padding	24 px
Bottom row	Character counter and action aligned along bottom

Validation states

- Text-only post: 1–280 characters.
- Image-only post is allowed by the PRD.
- Up to four images; each image must be within the PRD's 5 MB limit.
- Whitespace-only post must be rejected.

- Show a clear disabled/loading state while submitting.

Scope note

> Use the validation limits specified by the project requirements; confirm implementation-specific upload restrictions with the backend owner.

6. Screen 5 – User Profile

Reference image: 05_profile.png

Purpose

Display a user's identity, social counts and posts.

Layout

- Reuse the left navigation from the home feed.
- Main profile area contains a cover/banner region, avatar, name, username, bio and relationship action.
- Below the profile summary, show tabs and the user's posts.

Content and components

- Cover image/banner (optional visual treatment).
- Avatar.
- Display name and username.
- Bio.
- Followers and following counts.
- Follow / Following action (or Requested for a private account).
- Posts, Replies and Media tabs, if supported by implementation.
- Post cards using the same component style as the home feed.

Dimensions

Element	Specification
Avatar	88–104 px on desktop profile header
Profile content padding	24 px
Post cards	Reuse home-feed card dimensions and typography

Scope note

> The PRD requires profile viewing/editing, avatar, bio, unique username, follower/following counts and private-account behaviour. A cover image is a visual suggestion only; confirm before implementation because it is not listed as a required profile field.

7. Developer Handoff Checklist

- ■ Recreate each PNG as an editable Figma frame.
- ■ Use the shared colour and typography tokens.
- ■ Check desktop and mobile-width behaviour (minimum 360 px is stated in the PRD).
- ■ Add hover, focus, disabled, loading and error states where relevant.
- ■ Ensure labels, keyboard navigation, image alt text and readable contrast.
- ■ Share the Figma link with the team and keep this document in docs/design/.
- ■ Ask the API/backend owner to confirm any field or feature not specified in the PRD before implementation.

Suggested repository structure
